

A SOUP-A COOL RAM Module RGB Cube

✓ Stackable/Extendable

✓ SOUP-A COOL :D

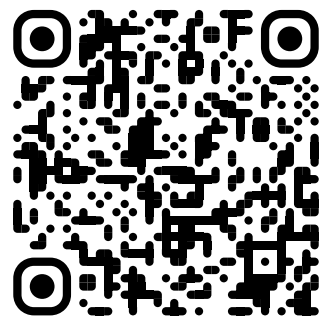

✓ Retro Computer Control Interface

What it does?

It have a parallel SRAM that can be accessed by the esp32 and z80 cpu at the same time.

During program execution of z80,it is usually hard to debug and hard to see how the data in ram changes without a emulator.

With LED cube ram module,it now can not only utilize it as a VRAM and display 3D images but also provide visual debug informations with RGB value calculated with the data in SRAM :D
